

## INTER-OFFICE MEMORANDUM

### Prince George's County Fire/EMS Department

**PGFD**

October 6, 2004

**To:** All Fire Department Personnel

**From:** Kirk Souder, Captain, Station 5  
Fire and Rescue Operations

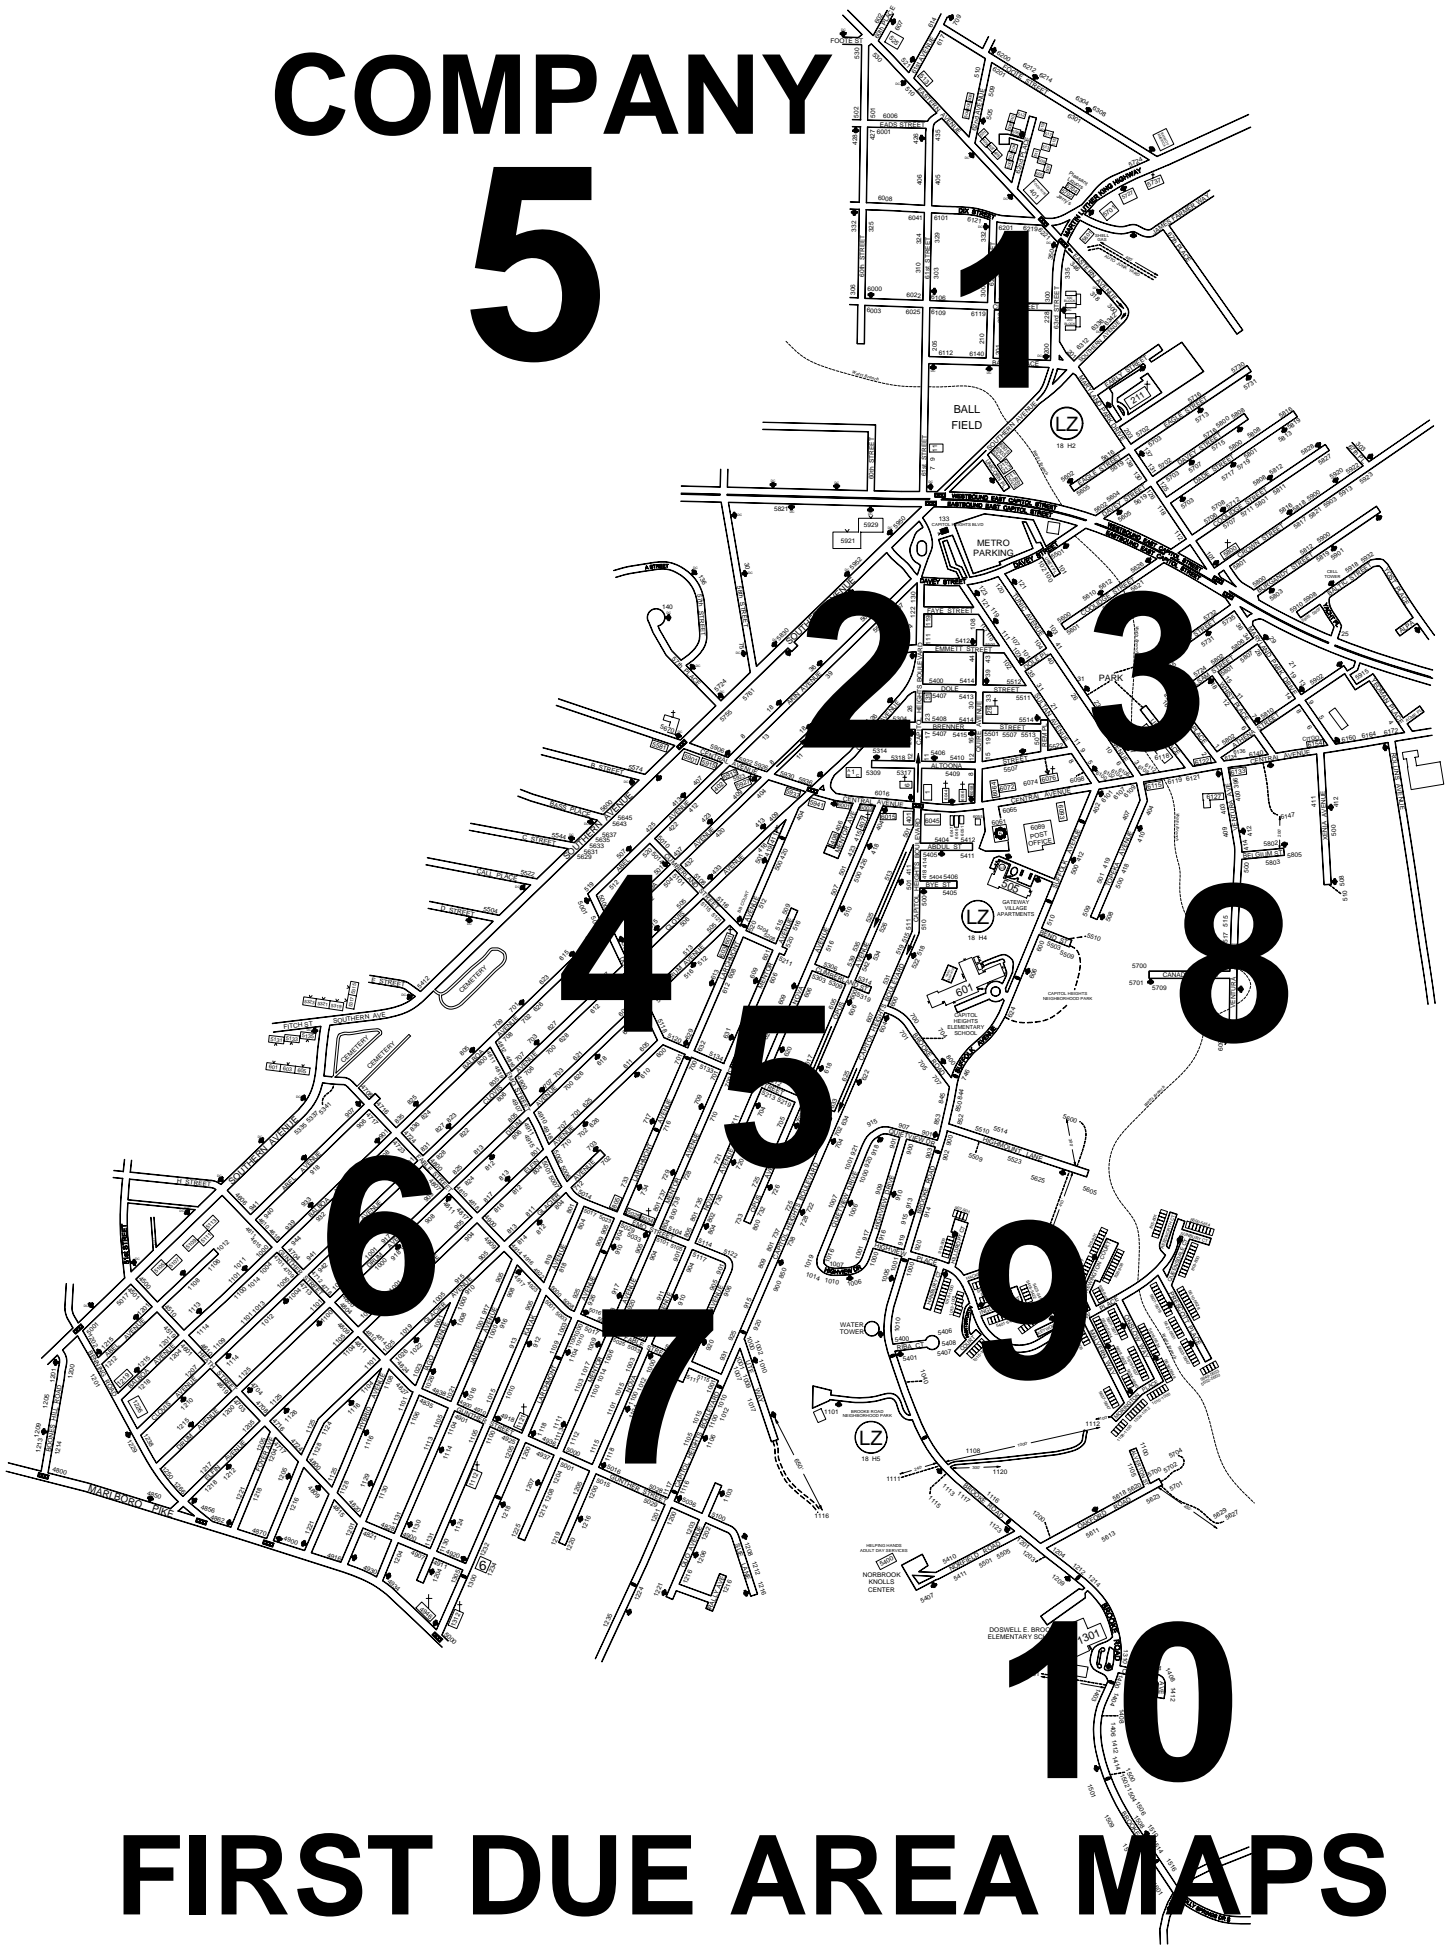

**RE:** New Maps for Company 5

The new maps for Company 5's first due area are completed and being distributed to all Companies who need a copy. The following information may be helpful with the explanation of the new format. Please call me at Company 5 if you have any questions.

- The indexes include hundred blocks, cross streets, street maps, box maps, and building names or complex names. Schools and Churches are also listed.
- The Box Areas map shows the box areas in Company 5's area and the dispatch order for all of 5's box areas.
  - The Overview of the first due area shows the number of the respective street map page over each of the 10 map page areas.
  - The Street Maps cover all streets, hydrants, and buildings. All pages are oriented with North being toward the top. All streets and buildings are proportional and drawn directly over an aerial view. Landing Zones are denoted by an "LZ" and the corresponding ADC map page number under each LZ to be used as information for the helicopters.
  - The Box Maps numbers correspond to the street maps. For example, every box map on Street Map page 8 would be 8A, 8B, etc. Some box maps display only the building floor plan. For example, Box Map 8A shows the floor plan for 505 Suffolk Avenue. For a view of the streets, hydrants, and access, refer to Map 8. Box Maps with the word "KEYS" under the map number denote the complexes and buildings for which Company 5 has keys. All Box Maps have a scale showing the distance between two points on the map. This will denote distances in relation to streets, hydrants, etc. or it will show dimensions of a building
  - The maps work best if all street maps are kept together (1-10) and then all box maps are kept together (1A-10A).
  - It is important to start the Street Maps with Page 1 and Page 2 in the same sheet protector so that when the book is open, Maps 2 and 3 are paired up, 4 and 5 are paired up, and so on.
